# Virtual Home Tours!

Stephanie Parker
COSC 729
Spring 2020

Why home tours?

- Practicality
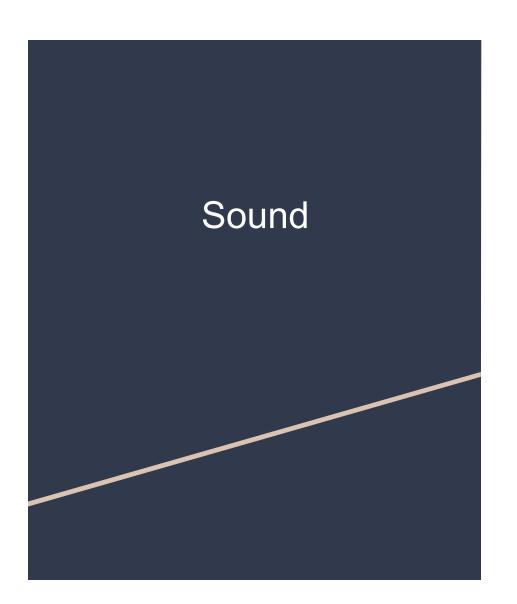

- Timing

Goals and Objectives

- Virtual Tour of two available vacation homes
- Set up as if people live there currently
- This, along with google street view, should help the client to know if they would like to see the home in person.

Interactivity

- The client would be using a screen sharing tool like Zoom or MS Teams.
- S/he would navigate using their mouse and the 'w', 'a', 's', and 'd' keys to walk around and view each place they are interested in.
- Ideally, the client would come to the real estate office and use some headset tool, like Occulus Quest.

Animation

- To make the scenes more realistic, the ground will use an image of real grass.
- There will be Avatars exercising, talking to one another, and lounging in and around the homes.

Sound

- Background noises like footsteps will be played as the client walks.
- Background music will also be played and can be turned off if necessary.
- Music that avatars are dancing to will be playing as well.

The End
